Notes: Project members are identifies by their FTDNA kit# and their ancestor. Members from other lab have phantom # starting with AN, SMGF, etc. Members are grouped together by DNA similarity as well as the geographic area where their ancestor lived. Related groups are identified by boxes with solid borders. The dark gray bar at the top of each group contains the modal values for that group if there are enough members to establish such. Bold fonts in this bar are deviations from the R1b modal values. The second colored bar represents subgroups. Bold fonts in this bar are deviations from the Group modal values. Within the results tables gray cells represent mutations or mismatches from the subgroup modal values. Colored cells represent mutations from the group modal as well as unique markers for the subgroup. Blue fonts represent deviation from the R1b1 modal for that group. Red/green fonts represent changes from the original FTDNA report
